

Vision Operator Training for System II Instruments

This basic class is recommended for all FOSS NIRSystems System II instrument operators. It includes all aspects of instrument diagnostics available to the operator, password configuration, sample presentation considerations and the routine analysis of products by NIR.

Part Number: **XT-1030**

Agenda

- Setting up a new project
- Security at the Operator level
- Performing diagnostic tests
- Collecting sample spectra
- Running Routine Analysis
- Analyzing previously collected spectra
- Recalling results
